

THE 7-NIGHT SLEEP RESET

One small change per day. Seven days. No supplements, no apps.

A FREE GUIDE BY BLANK BODY • @THEBLANKBODY

How it works

Most sleep advice fails because it asks you to change ten things at once. This reset adds **one habit per day** and keeps the previous ones. By night 7 you are running all seven.

Before you start, write down two numbers for tonight:

What time did I fall asleep? (best guess) _____

How rested do I feel when I wake up? (1 to 10) _____

Write them again on day 8. That's your result.

> This guide is educational and doesn't replace medical advice. If you snore loudly, stop breathing at night, or have struggled with sleep for more than 3 months, talk to a doctor.

DAY 1 Pick a fixed wake-up time

Your body clock is anchored by when you wake up, not when you go to bed.

- Choose a wake-up time you can keep **every day, weekends included** (within 30 minutes).
- Set it now. Don't touch it for 7 days.
- Tired on day 2 or 3? Normal. Don't sleep in: the sleep pressure will make tonight easier.

DAY 2 Ten minutes of morning light

Light is the signal your clock reads.

- Within the first hour of waking, go outside for **10 minutes** (20 if it's cloudy).
- Before your phone if you can. No sunglasses. Coffee in hand is fine.
- A window is not enough: indoor light is usually a few hundred lux, outdoors is often thousands.

DAY 3 The caffeine cut-off

Caffeine has a half-life of about 5 hours, longer for some people.

- **No caffeine within 8 hours of bed.** Bed at 11 pm? Last coffee at 3 pm.
- Watch for hidden caffeine: tea, cola, energy drinks, pre-workout, dark chocolate.
- Afternoon slump? Walk 10 minutes outside and drink a glass of water.

DAY 4 Move during the day

Sleep pressure builds faster when your body actually did something.

- Add **2,000 steps** to what you normally do (about 20 minutes of walking).
- A walk after lunch is perfect: it also helps your energy in the afternoon.
- Hard training is fine, but try to finish it 2 to 3 hours before bed.

DAY 5 Dim the evening

Bright light at night tells your clock it's still daytime.

- **One hour before bed**, switch to low, warm lamps. Big ceiling lights off.
- Screens: lower the brightness and turn on night mode. Better: charge your phone outside the bedroom.

DAY 6 Build the cave

Your bedroom has one job.

- **Cool**: around 18 °C (65 °F) works for most people.
- **Dark**: blackout curtains or an eye mask. Cover small LEDs.
- **Quiet**: earplugs or a fan if your street is noisy.
- Bed is for sleep. Work, scrolling and series happen somewhere else.

DAY 7 The wind-down routine

Give your brain a ramp, not a cliff.

- Same 20-minute routine every night: shower, stretch, read paper pages, or write tomorrow's to-do list.
- Can't sleep after about 20 minutes? Get up, go somewhere dim, do something boring, come back when sleepy.
- Don't check the clock in the night. It turns tiredness into stress.

DAY 8 Check your numbers

Write the two numbers again and compare with day 1. Keep the habits that made the biggest difference, especially the **fixed wake-up time** and **morning light**: they do most of the work.

Fell asleep at: _____ Rested (1 to 10): _____

Your cheat sheet

Habit	Rule
Wake-up	Same time every day, ±30 min
Morning light	10 min outside (20 if cloudy), first hour
Caffeine	None within 8 h of bed
Movement	+2,000 steps, walk after lunch
Evening light	Dim and warm, 1 h before bed
Bedroom	Cool, dark, quiet, phone out
Wind-down	Same 20-min routine; up after ~20 min awake
